

SARGCOOP

WORK PACKAGE: CARIBBEAN SARGASSUM FORUM

07 APRIL 2022 WEBINAR: « COLLECTION AND VALORIZATION OF SARGASSUM IN THE **CARIBBEAN: ISSUES AND PROSPECTS»**

The Role of Digital Technologies in Creating Sustainable **Value Chains for Sargassum Presenter: Dr. Shelly-Ann Cox**

SUSTAINABLE SARGASSUM VALUE CHAINS

01

Overview of a generic sargassum value chain, considerations for building resilience at each stage and the importance of cross-cutting activities

INTEGRATION OF DIGITAL TECHNOLOGIES

02

The promise of block chain, IoT devices, Artificial Intelligence (AI), Machine Learning and Deep learning in sargassum management and governance

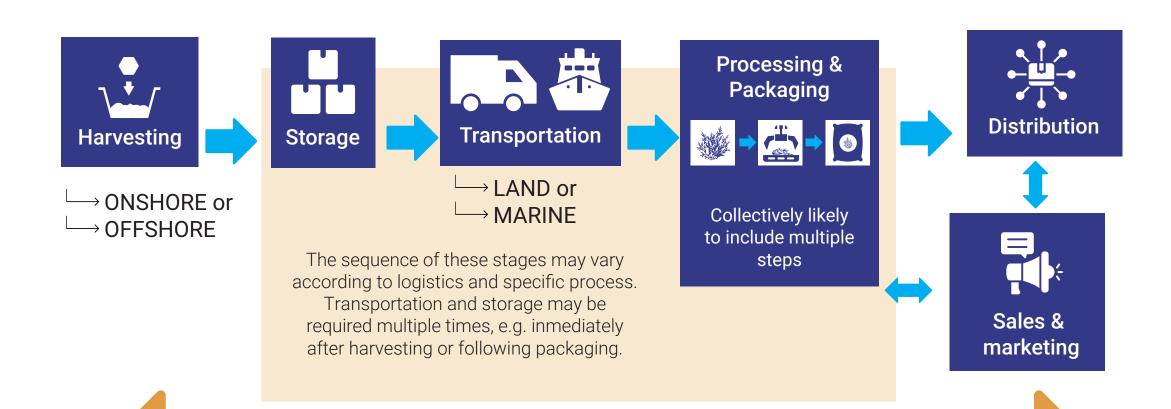

EXISTING AND POTENTIAL TECHNOLOGIES

Examples of existing and potential applications of digital technologies. Future applications for a sustainable future

03

CROSS CUTTING ACTIVITIES:

Research & development

Quality control

Environmental and social safeguards, mitigation of impacts

Source: UNEP-CEP Sargassum White Paper 2021

MANAGE, MEASURE AND CREATE INSIGHT

SERVICE ORIENTATION

DIGITAL ORIENTATION

PROVIDE ORGANIZATIONAL CHANGE

DELIVER CONTINUAL SERVICE IMPROVEMENT

EFFICIENCY

TRACEABILITY

SATISFACTION

PROFITABILITY

CUSTOMER

RESEARCH AND DEVELOPMENT

Satellite monitoring, Mobile applications, Information Communication Technology (ICTs), Blockchain, Internet of Things (IoTs), Al, Machine learning and Deep learning

QUALITY CONTROL

Blockchain powered traceability platforms, Internet of Things (IoT) sensors and devices e.g. heavy metal testing

ENVIRONMENTAL AND SOCIAL SAFEGUARDS

Internet of Things (IoT) sensors and devices e.g. CAIRNET Micro Sensors (H₂S and NH₃)

MITIGATION OF IMPACTS

Geographic Information Systems (Sargassum hazard and exposure mapping), Decision Support Systems

Harvesting

UAV and underwater robots to estimate volumes & types
Semi-autonomous aqua drones for

Storage/Transportation

IoT devices and sensors to support ideal storage practices. Vessel monitoring systems (sea | GPS tracking systems (land). Data verification and analytics to support efficient operations.

Processing and packaging

to support efficient operations

E.g. Smart scales solar-powered autonomous processor, 3D printers

Distribution

Supply chain insight platforms powered by blockchain and Al Vessel Monitoring Systems (sea) | GPS

Sales and Marketing

Online sales and marketing platforms powered by blockchain and Al

Social media marketing and Al-powered insights

DEVELOPMENT

Harvesting

- Unmanned Aerial Vehicles (UAV) e.g. drones and semiautonomous underwater robots can be used to estimate sargassum volumes & species types
- Monitoring and mapping sargassum influxes using Artificial Intelligence (AI) and evolving technologies can support response planning
- Machine learning algorithms to classify, batch and compress labelled datasets
- Semi-autonomous aquadrones for harvesting sargassum at sea

Storage/Transportation

STORAGE

 Internet of things (IoT) devices and sensors to support ideal storage practices

TRANSPORTATION

- Vessel monitoring systems (sea)
- GPS tracking systems (land)
- Data verification and analytics to support efficient operations

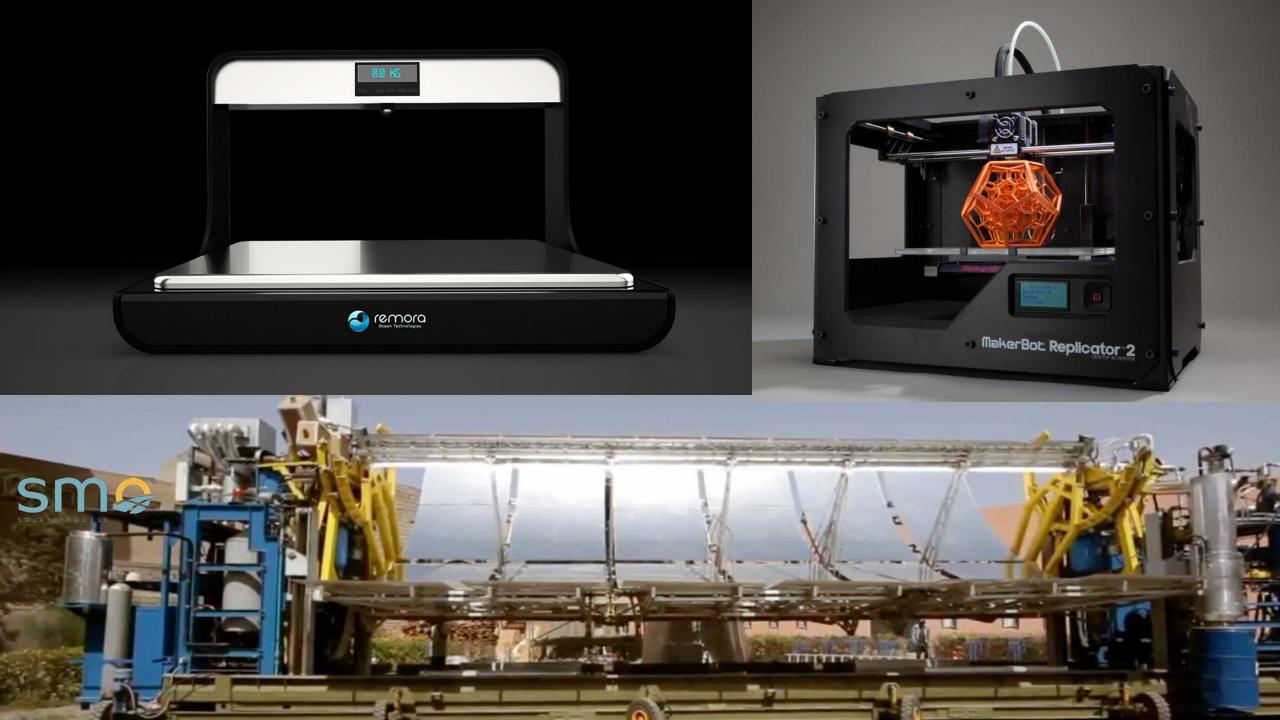

Processing and packaging

- IoT devices and sensors to support efficient operations
- Smart scales can be used to determine weights and support image processing. Data is uploaded to cloud and can be matched to the harvesting vessel or beach where sargassum was harvested.
- 3D printers can be employed using bioplastic made from sargassum to create environmentally friendly packaging
- Solar-powered autonomous processor turns waste and biomass (sargassum) into green hydrogen, energy and carbonated byproducts

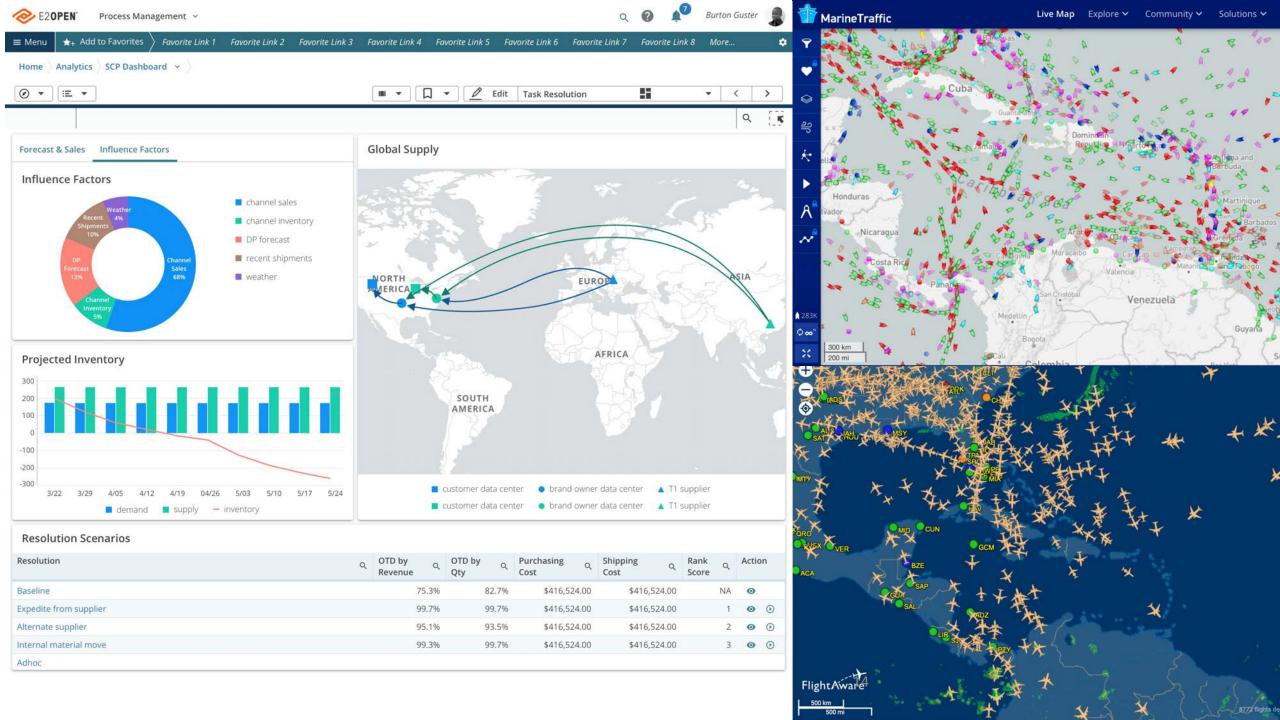

Distribution

- Supply chain management platforms powered by blockchain and AI can promote resilient distribution plans to handle market changes, including supply disruptions and demand increases
- Vessel Monitoring Systems (sea), GPS tracking systems (land), flight trackers (air) employed to collect location data that can support more efficient distributions plans

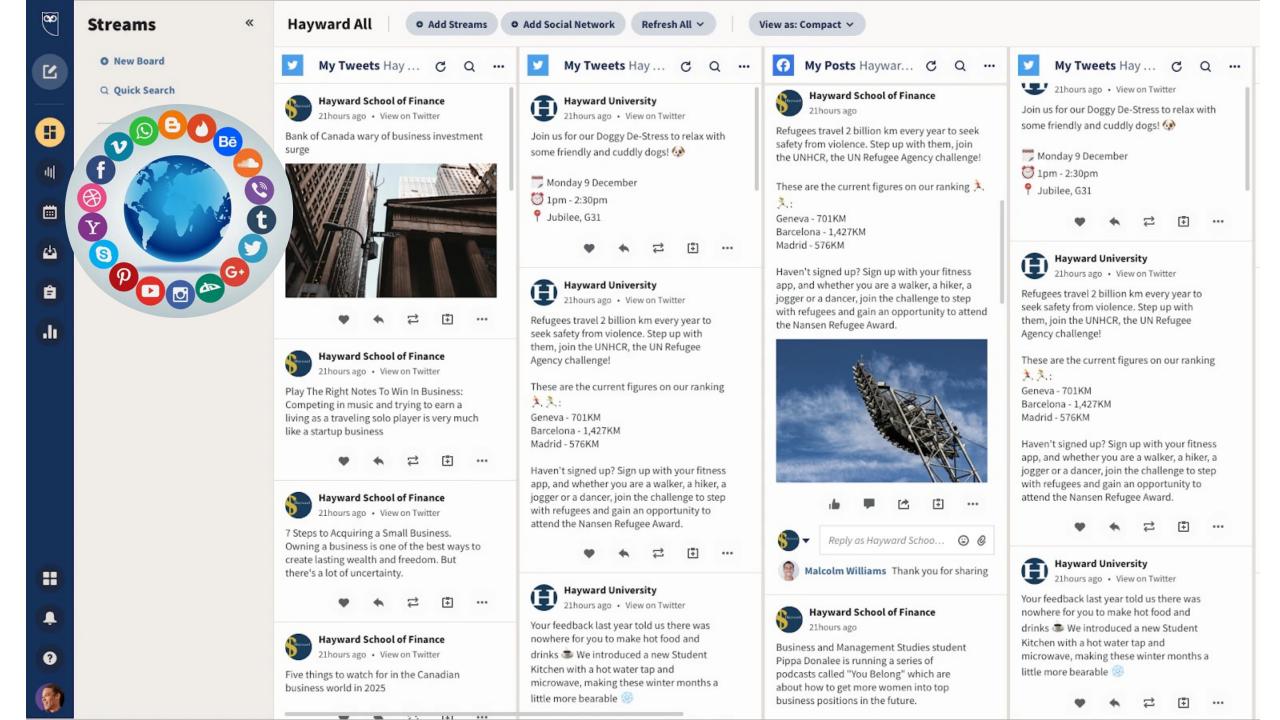

Sales and Marketing

- Online sales and marketing platforms powered by Blockchain and Artificial Intelligence (AI)
- Social media marketing using platforms such as Facebook, Twitter, LinkedIn, Instagram, YouTube, Pinterest, TikTok. Al-powered insights
- Social media marketing platforms e.g. Hootsuite
- Branding sargassum products and services as blue growth initiatives

NON FUNGIBLE TOKENS

Creatives producing sargassum related art should consider the use of Non Fungible Tokens (NFTs)

2

BLUE BLOCKCHAIN

Blockchain powered blue carbon credit trading platforms can be considered in the future

3

TECH STARTUP COLLABORATIONS

Sargassum innovators should explore collaborations with tech startups in the region
